WARRANTY

Tebben Enterprises of Clara City, Minnesota 56222, warrants that its products and their components will be free from defects in material and workmanship for a period of one (1) year from the date of original purchase when used as intended and under normal service and conditions. This warranty is limited to the replacement of any defective part by **Tebben Enterprises**, provided that any such defective part must be returned to **Tebben Enterprises**, TRANSPORTATION PREPAID, accompanied by a letter setting forth the nature of the defect. If the part is found to be defective by reason of materials or workmanship, **Tebben Enterprises**, shall replace the part, but shall not be responsible for its re-installation.

This warranty does not cover or apply to any products or component parts which have been tampered with, modified or altered in any way or which have been subject to misuse, negligence, involved in an accident, or damaged by and act of God.

EXCLUSION OF WARRANTIES

TEBBEN ENTERPRISES MAKES NO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE IN RESPECT TO ITS PRODUCTS OR COMPONENT PARTS. TEBBEN ENTERPRISES SHALL NOT BE LIABLE FOR ANY CONSEQUENTIAL OR INCIDENTAL DAMAGES FROM ANY BREACH OF WARRANTY, INCLUDING, BUT NOT LIMITED TO, LOSS OF PROFITS, INCONVENIENCE, AND THE COST OF RENTAL OR REPLACEMENT EQUIPMENT. NO AGENT, EMPLOYEE OR REPRESENTITIVE OF TEBBEN ENTERPRISES HAS THE AUTHORITY TO BIND IT TO ANY AFFIRMATION, STATEMENT OF WARRANTY CONCERNING ITS PRODUCTS AND THEIR COMPONENT PARTS EXCEPT AS SPECIFICALLY SET FORTH HEREIN.

INTRODUCTION

Congratulations on your choice of a Tebben Rotary Cutter to complement your mowing operation. This equipment has been designed and manufactured to meet the needs of a discriminating buyer for the efficient cutting of grass.

Safe, efficient and trouble free operation of your Rotary Cutter requires that you and anyone else who will be operating or maintaining the machine, read and understand the Safety, Operation, Maintenance and Trouble Shooting information contained within the Operator's Manual.

This manual covers the Tebben Rotary Cutter Models TC94-400, TC94-500, TC94-600, TC94-500MC, TC94-600MC, TC94-700MC, TC07-40, TC07-400, TC07-500, TC07-600, TC10-400, TC10-500, & TC10-600. Differences are covered and explained where appropriate. Use the Table of Contents as a guide to locate required information.

Keep this manual handy for frequent reference and to pass on to new operator or owners. Call your Tebben dealer or distributor if you need assistance, information or additional copies of the manuals.

OPERATOR ORIENTATION - The directions left, right, front and rear, as mentioned throughout this manual, are as seen from the driver's seat and facing in the direction of travel.

SAFETY

SAFETY ALERT SYMBOL

This Safety Alert symbol means ATTENTION! BECOME ALERT! YOUR SAFETY IS INVOLVED!

The Safety Alert symbol identifies important safety messages on the Tebben Rotary Cutter and in the manual. When you see this symbol, be alert to the possibility of personal injury or death. Follow the instructions in the safety message.

Why is **SAFETY** important to you?

3 BIG REASONS

Accidents Disable and Kill Accidents Cost Accidents Can Be Avoided

SIGNAL WORDS:

Note the use of the signal words DANGER,WARNING and CAUTION with the safety messages. The appropriate signal word for each message has been selected using the following guide lines: **DANGER** - An immediate and specific hazard which WILL result in severe personal injury or death if the proper precautions are not taken.

WARNING - A specific hazard or unsafe practice which COULD result in severe personal injury or death if proper precautions are not taken.

CAUTION - Unsafe practices which COULD result in personal injury if proper practices are not taken, or as a reminder of good safety practices.

SAFETY

YOU are responsible for the SAFE operation and maintenance of your Tebben Rotary Cutter. YOU must ensure that you and anyone else who is going to operate, maintain or work around the Cutter be familiar with the operating and maintenance procedures and related SAFETY information contained in this manual. This manual will take you step-by-step through your working day and alerts you to all good safety practices that should be followed while operating your Rotary Cutter.

Remember, YOU are the key to safety. Good safety practices not only protect you but also the people around you. Make these practices a working part of your safety program. Be certain that EVERYONE operating this equipment is familiar with the recommended operating and maintenance procedures and follows all the safety precautions. Most accidents can be prevented. Do not risk injury or death by ignoring good safety practices.

- Rotary Cutter owners must give operating instructions to operators or employees before allowing them to operate the Cutter, and at least annually thereafter per OSHA (Occupational Safety and Health Administration) regulation 1928.57.
- The most important saftey device on this equipment is a SAFE operator. It is the operator's responsibility to read and understand ALL Safety and Operating instructions in the manual and to follow these. All accidents can be avoided.
- In addition to the design and configuration of equipment, hazard control and accident prevention are dependant upon the awareness, concern, prudence and proper training of personnel involved in the operation, transport, maintenance and storage of equipment. Train all new personnel and review intructions frequently with existing workers. A person who has not read and understood all operating and safety instructions is not qualified to operate the machine. An untrained operator exposes himself and bystanders to possible serious injury or death.
- Do not modify the equipment in any way. Unauthorized modification may impair the function and/or safety and could affect the life of the equipment.

GENERAL SAFETY

- Read and understand the Operator's Manual and all safety signs before operating, maintaining, adjusting or unplugging the Cutter.
- Have a first-aid kit available for use should the need arise and know how to use it.
- Have a fire extinguisher available for use should the need arise and know how to use it.
- Wear appropriate protective gear. This list inlcudes but is not limited to:
 - A hard hat
 - Protective shoes
 - with slip resistant soles
 - Protective goggles, glasses or face shield
 - Heavy gloves
 - Protective Clothing
- 5. Install and secure all guards before starting.
- 6. Do not allow riders.
- Wear Suitable ear protection for prolonged exposure to excessive noise.
- Place all controls in neutral, stop tractor engine, set park brake, remove ignition key and wait for all moving parts to stop before servicing, adjusting, repairing or unplugging.
- 9. Clear the area of people, especially small children, before starting the unit.
- Review safety related items annually with all personnel who will be operating or maintaining the Cutter.

NO RIDERS

OPERATING SAFETY

- 1. Read and understand the Operators Manual and all safety signs before operating, servicing, adjusting, repairing or unplugging.
- 2. DO NOT allow riders.
- 3. Install and secure all guards and shields before starting or operating.
- 4. Keep hands, feet, hair and clothing away from moving parts.
- 5. Place all controls in nuetral, stop tractor engine, set park brake, remove ignition key and wait for all moving parts to stop before servicing, adjusting, repairing or unplugging.
- 6. Place all tractor and machine controls in neutral before starting.
- 7. **NEVER** start operate machine unless sitting on tractor seat.
- 8. Clear the area of bystanders, especially small children, before starting.
- 9. Stay away from PTO shaft and machine when engaging PTO. Keep others away.
- 10. Clean reflectors, SMV and lights before transporting.
- 11. Use hazard flashers on tractor when transporting.
- 12. **DO NOT** put hands or feet under machine while tractor engine or machine is running.
- 13. **DO NOT** Operate Cutter in the raised position.
- 14. Objects can be thrown out from under machine with sufficient force to severely injure people. Stay away from machine when it is running. Keep others away.
- 15. Chain guard deflectors are reccomeded during operation.
- 16. Always know what you are cutting. Never operate Cutter in an area that has hidden obstacles. Remove sticks, stones, wire or other objects from working area before starting.
- 17. Review safety instructions with all operators annually.

MAINTENANCE SAFETY

- 1. Follow **ALL** the operating, maintenance and safety information in the manual.
- 2. Support the machine with blocks or safety stands when working beneath it.

ACAUTION

- Follow good shop practices

 Keep service area
 clean and dry.
 Be sure electrical
 outlets and tools
 are properly
 grounded.
 Use adequate light
 for the job at hand.
- 4. Use only tools, jacks and hoists of sufficient capacity for the job.
- 5. **NEVER** work on blades or under the machine unless the tractor engine is off and driveline is disconnected.
- 6. Wear heavy canvas or leather gloves when handling sharp blades.
- 7. Make sure all guards are in place and properly secured when maintenance work is completed.
- 8. **NEVER** wear ill-fitting, baggy or frayed clothing when working around or on and of the drive system components.
- 9. Keep hands, feet, hair and clothing away from moving or rotating parts.
- 10. Clear the area of bystanders, expecially small children, when carrying out any maintenance and repairs or making any adjustments.

TRANSPORT SAFETY

- 1. Make sure you are in compliance with all local regulations regarding transporting equipment on public roads and highways.
- 2. Make sure the SMV (Slow Moving Vehicle) emblem and all the lights and reflectors that are required by the local highway and transport authorities are in place, are clean and can be seen clearly by all overtaking and oncoming traffic.
- 3. **DO NOT** allow anyone to ride on the CUTTER or tractor during transport.
- 4. **DO NOT** exceed 20 mph (32 kph). Reduce speed on rough roads and surfaces.
- 5. Use retainers on the mounting pins when attaching.
- 6. **ALWAYS** use hazard flashers on the tractor when transporting unless prohibited by law.

STORAGE SAFETY

- 1. Store the unit in an area away from human activity.
- 2. DO NOT permit children to play on or around the stored machine.
- 3. Store the unit in a dry, level area. Support the frame with planks if required.

SAFETY DECALS

- 1. Keep safety decals and sign clean and legible at all times.
- 2. Replace safety decals and signs that are missing or have become illegible.
- 3. Replaced parts that displayed a safety sign should also display the current sign.
- 4. Safety decals or signs are available from your dealer parts department or the manufacturer.

How to Install Safety Decals:

- Be sure that the installation area is clean and dry.
- Decide on the exact position before you remove the backing paper.
- Remove the smallest portion of the split backing paper.
- Align the decal over the specified are and carefully press the small portion with the exposed sticky backing in place.
- Slowly peel back the remaining paper and carefully smooth the remaining portion of the decal in place.
- Small air pockets can be pierced with a pin and smoothed out using the piece of decal backing paper.

SIGN-OFF FORM

TEBBEN ENTERPRISES follows the general Safety Standards specified by the American Society of Agricultureal Engineers (ASAE) and the Occupational Safety and Health Administration (OSHA). Anyone who will be operating and/or maintaining the Cutter must read and clearly understand ALL Safety, Operating and Maintenance information presented in this manual.

DO NOT operate or allow anyone else to operate this equipment until such information has been reviewed. Annually review this information before the season start-up.

Make these periodic reviews of **SAFETY** and **OPERATION** a standard practice for all your equipment. We feel that an untrained operator is unqualified to operate this machine.

A sign-off sheet is provided for your record keeping to show that all personnel who will be working with the equipment have read and understand the information in the Operator's Manual and have been instructed in the operation of the equipment.

SIGN-OFF FORM

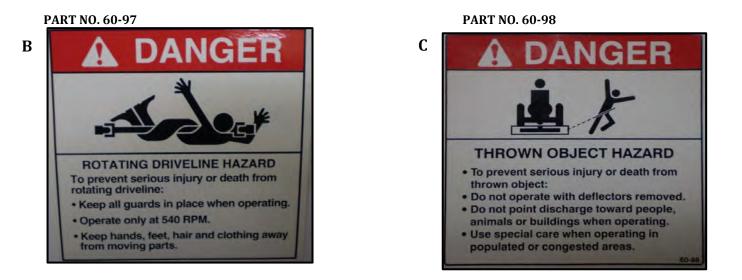

SAFETY DECAL LOCATIONS

The types of decals and locations on the equipment are shown in the illustration below. Good Safety requires that you familiarize yourself with the various Safety Decals, the type of warning and the area, or particular function related to that area, that requires your SAFETY AWARENESS.

* Think SAFETY! Work SAFELY!

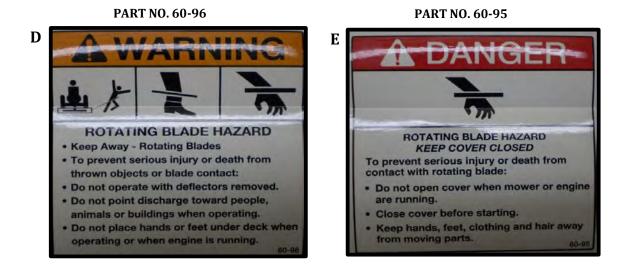

REMEMBER - If Safety Decals have been damaged, removed, beome illegible or parts replaced without decals, new decals must be applied. New decals are available from your authorized dealer.

The types of decals and locations on the equipment are shown in the illustration below. Good safety requires that you familiarize yourself with the various Safety Decals, the types of warning and the area, or particular function related to that area, that requires your SAFETY AWARENESS.

* Think SAFETY! Work SAFELY!

PART NO. 48-106

PART NO. 60-1000

REMEMBER - If Safety Decals have been damaged, removed, become illegible or parts replaced without decals, new decals must be applied. New decals are available from your authorized dealer.

OPERATION

- 1. Read and understand the Operator's Manual and all safety signs before operating, servicing, adjusting, repairing or unplugging.
- 2. Do not allow riders.
- 3. Install and secure all guards and shields before starting or operating.
- 4. Keep hands, feet, hair and clothing away from moving parts.
- Place all controls in neutral, stop tractor engine, set park brake, remove ignition key and wait for all moving parts to stop before servicing, adjusting, repairing, or unplugging.
- 6. Place all tractor and machine controls in neutral before starting.
- 7. Never start or operate machine unless sitting on tractor seat.
- 8. Clear the area of bystanders, especially small children, before starting.
- 9. Stay away from PTO shaft and machine when engaging PTO. Keep others away.

OPERATING SAFETY

- 10. Clean reflectors, SMV and lights before transporting.
- 11. Use hazard flashers on tractor when transporting.
- 12. Do not put hands and feet under machine while tractor engine or machine is running.
- 13. Do not operate Cutter in raised position.
- 14. Objects can be thrown out from under machine with sufficient force to severly injure people. Stay away from machine when it is running. Keep others away.
- 15. Operate only with chain guard deflectors installed.
- 16. Always know what you are cutting. Never operate cutter in an area that has hidden obstacles. Remove sticks, stones, wire or other objects from working area before starting.
- 17. Review safety instructions with all operators annually.

TO THE NEW OPERATOR OR OWNER

The Tebben Implement Rotary Cutter is designed to cut a variety of grassses and other ground covers. Rotational power to the blades is provided by the tractor PTO. Be familiar with the machine before starting.

In addition to the design and configuration of equipment, hazard control and accident prevention are dependant upon the awareness, concern, prudence and proper training of personnel involved in the operation, transport, maintenance and storage of equipment. It is the responsibility of the owner or operator to read this manual and to train all other operators before they start working with the machine. Follow all safety instructions exactly. Safety is everyones business. By following recommended procedures, a safe working environment is provided for the operator, bystanders and the area around the worksite. Untrained operators are not qualified to operate the machine. Many featres incorporated into this machine are the result of suggestions made by customers ilke you. Read this manual carefully to learn how to operate the machine safely and how to set it to provide maximum field efficiency. By following the operating instructions in conjuction with a good maintenance program, your Cutter will provide many years of trouble-free service.

MACHINE COMPONENTS

The Tebben Rotary Cutter consists of a large rotating plate that has free-swinging steel blades attached to it. The blades cut the grass while traveling over the working area. Rotational power to the plate is provided by the tractor PTO through a gear box in the center of the machine. An access cover on the deck provides the operator with access to the blade bolts. The Rotary Cutter attaches to the 3 point hitch on the tractor.

MACHINE BREAK-IN

Although there are no operational restrictions on the Rotary Cutter when used for the first time, it is recommended that the following mechanical items be checked:

- A. After operating for 1/2 hour or after completing 2 acres:
 - Check all nuts, bolts and other fasterners. Tighten to their specified torque levels.
 - 2. Tighten blade bolts to their specified torque levels.
 - 3. Check that the blades are in good condition and swing freely.
 - 4. Check the oil level in the gear box. Add as required.
 - 5. Check that the PTO driveline shield turns freely.
 - 6. Lubricate all grease points.
- B. After operating for 5 hours and 10 hours:
 - 1. Repeat items 1 through 5 of section A.
 - 2. Then go to the regular service schedule.

PRE-OPERATION CHECKLIST

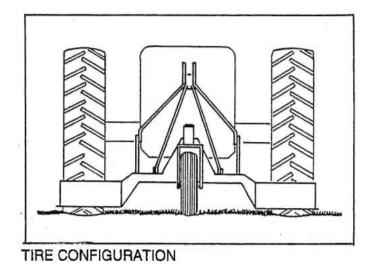

Efficient and safe operation of the Tebben Rotary Cutter requires that each operator reads and understands the operating procedures and all related safety precautions outlined in this section. A preoperation checklist is provided for the operator. It is important for both the personal safety and maintaining the good mechanical condition of the Rotary Cutter that this checklist is followed.

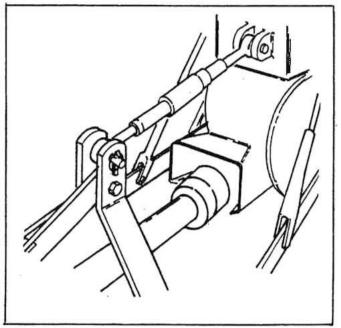

Before operating the machine and each time thereafter, the following areas should be checked off:

- 1. Lubricate the machine per the schedule outlined in Section 5 Service and Maintenance.
- 2. Use only an Agricultural tractor of horsepower within the limits of the machine specified in Table 1.
- 3. Check that the machine is properly attached to the tractor. Be sure retainers aer used on the mounting pins.
- 4. Be sure extra weights are mounted on the front of the tractor.
- 5. Check the oil level in the gear box. Add as required.
- 6. Check that the PTO driveline turns freely and that the driveline can telescope easily.
- Check the blades. Be sure they are not damaged or broken and swing freely on their mount. Repair or replace as required.
- 8. Check the blade bolts. Tighten to their specified torque.
- 9. Check for entangled material in all rotating parts. Remove this material.
- 10. Install and secure all guards, doors and covers before starting.

Table 1 Horsepower vs Width

Model	Width	Horsepower	
TC94-400	48"	30	
TC94-500	60"	40	
TC94-600	72"	40	

3 POINT HITCH

ATTACHING/UNHOOKING

The Cutter should always be located on a level, dry area that is free of debris and other foreign objects. When attaching the machine to a tractor, follow this procedure.

- 1. Clear the area of bystanders, especially small children.
- 2. Be sure the tractor 3 point hitch is in the Category 1 configuration and the lift arms are in the non-sway configuration (see tractor manual).
- 3. Be sure that weights are added on the front of the tractor.
- 4. Make sure there is enough room and clearance to safely back up to the machine.
- 5. Attach the PTO driveline to the cutter if it was removed for storage (See Assembly).
- 6. While backing up, align the lift arm balls with the mounting pins on the Cutter.

NOTE

It may be necessary to add weight to the 3 point hitch to lower the lift arms.

- Stop tractor, set park brake, remove ignition key and wait for all moving parts to stop before dismounting.
- 8. Align the left lower link arm with the mounting pin.
- 9. Slide the ball over the pin and install the retainer.

- 10. Use the screw jack on the right lift arm to align the ball with the pin.
- 11. Slide the ball over the mounting pin and install the retainer.
- 12. Level the frame and lift arms using a screw jack.
- 13. Remove retainer and pin from the mast.
- 14. Align top link using the turnbuckle.
- 15. Insert pin and install retainer.
- 16. Set the mast using the turnbuckle to place the mounting pin in the center of its slot.
- 17. Attach the PTO driveline:
 - a. Check that the driveline telescopes easily and that the shield rotates freely.

IMPORTANT

Be sure that the driveline does not bottom out when going through its working angles

- b. Attach the driveline to the tractor by retracting the locking pin, slide the yoke over the shaft and push on the yoke until the lock pin clicks into position. Pull on the yoke to be sure it is locked in position.
- 18. Use the 3 point hitch to raise the machine.
- 19. Reverse the above procedure when unhooking from the tractor.

FIELD OPERATION

- 1. Read and understand the Operator's Manual and all safety signs before operating, servicing, adjusting, repairing or unplugging.
- 2. Do not allow riders.
- 3. Install and secure all guards and sheilds before starting or operating.
- 4. Keep hands, feet, hair and clothing away from moving parts.
- 5. Place all controls in neutral, stop tractor engine, set park brake, remove ignition key and wait fro all moving parts to stop before servicing, adjusting, repairing or unplugging.
- 6. Place all tractor and machine controls in neutral before starting.
- 7. Never start or operate machine unless sitting on tractor seat.
- 8. Clear the area of bystanders, especially small children, before starting.
- 9. Stay away from PTO shaft and machine when engaging PTO. Keep others away.

OPERATING SAFETY

- 10. Clean reflectors, SMV and lights before transporting.
- 11. Use hazard flashers on tractor when transporting.
- 12. Do not put hands or feet under machine while tractor engine or machine is running.
- 13. Do not operate Cutter in the raised position.
- Objects can be thrown out from under machine with sufficient force to severly injure people. Stay away from machine when it is running. Keep others away.
- 15. Operate only with chain guard deflectors installed.
- 16. Always know what you are cutting. Never operate cutter in an area that has hidden obstacles. Remove sticks, stones, wire or other objects from working area before starting.
- 17. Review safety instructions with all operators annually.

Rotary Cutters are designed with the inherent flexibility of operating well in almost any kind of grass and terrain conditions. However the operator has the responsibility of being familiar with all operating and safety procedures and following them.

In addition to the design and configuration of equipment, hazard control and accident prevention are dependent upon the awareness, concern, prudence and proper training of personnel involved in the operation, transport, maintenance and storage of equipment. Each operator should review this section of the manual at the start of the season and as often as required to be familiar with the machine. When using, follow this procedure:

- 1. Review and follow the Pre-Operation Checklist.
- 2. Attach the tractor to the machine.
- 3. Before going to the cutting area review transporting.
- 4. Pull into the field and stop in a level area.
- 5. Lower into working position.

- 6. Set the Machine
 - Level the Frame:
 Use the screw jack on the right lift arm to level the frame from side-to-side.

Use the turnbuckle on the top link to center the top pin in its slot. This will allow the machine to follow the contour of the ground.

Set the 3 point hitch so deck is 1 to 2 inches (25 to 50 mm) higher at the rear of the deck than the front.

NOTE

It may be necessary to adjust the height of the rear wheel.

b. Height:

Use the adjustment on the trailing wheel to set the height of the deck.

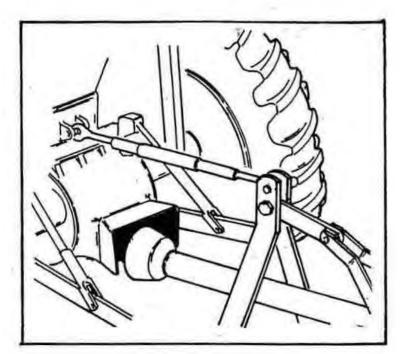

Center hole for normal cutting.

Bottom hole in rough terrain to prevent scalping or when cutting tall or coarse grass.

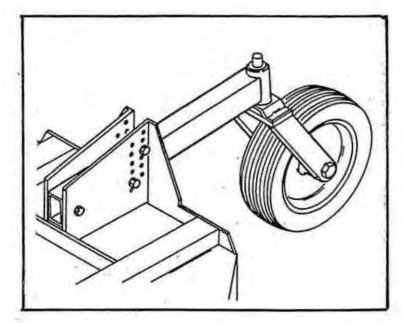

Top hole in smooth conditions with fine grass.

c. 3 Point Hitch:

Place the 3 point hitch into its "float" operating mode to allow the machine and the hitch to move up and down as required to follow ground contours.

LEVELING ROTARY CUTTER FRAME

WHEEL HEIGHT

- 7. Align the unit with the working area.
- 8. Starting machine:a. Run the engine at low idle.
 - b. Slowly engage the PTO control to start the machine.
 - c. Slowly bring the engine to the rated PTO speed. Never exceed rated speed.
 - d. Lower the machine to the ground and proceed down the field.
- 9. Stopping machine:
 - a. Slowly decrease engine speed to low idle.

Never operate Cutter in the raised position.

WARNING

b. Disengage PTO clutch slowly.

Place all controls in neutral, lower machine, stop engine, set park brake, remove ignition key and wait for all moving parts to stop before dismounting.

10. Ground speed:

Travel speed can vary between 3 and 8 mph (5 and 13 kph) depending on the grass and terrain conditions. It is the responsibility of the operator to note the condition of the job being done and set the speed to obtain a quality cutting job and maintain control of the machine.

The speed can be increased if a good job is being done.

Decrease speed if you are producing a ragged cut or leaving patches uncut.

- 11. Operating hints:
 - a. Although it is best to cut when it is dry, the cutter works well in we conditions as well. However, the operator will have to travel slower to do the same quality cutting. It will also be necessary to clean the machine more frequently to prevent caking and clogging of the blade area.
 - b. The cutter should always be operated at the rate speed of 540 RPM. The cutting action is generated by the speed of the blade tip. When the speed drops below a certain rate (slowing of the input speed or RPM), the blades start to tear the material rather than cut it and will give a "ragged" looking cut.

CAUTION

Never exceed PTO speed of 540 RPM

c. Vary ground speed by changing gears in the tractor transmission rather than changing the throttle setting. Forward travel speeds can range from 3 to 8 MPH (5 to 13 km/h) or more depending on the type of terrain, frass or crop cover length,

moisture level and power available. It is the operators responsibility to determine and operate the machine at a safe speed at all times.

- d. If the crop or grass is tall, cut it twice to obtain the best results. This allows the unit to cut less material on each pass.
- e. When cutting a new area for the first time, always set the mower to cut high to clear unknown obstructions. If none are found, the cutter can be run lower for the second pass.
- f. Never cut grass shorter than recommended for your weather conditions. Short grass is less able to withstand hot and dry conditions. It is better for it to be cut more often at a longer length than to cut it.
- g. The blades will ned sharpening when you see that the grass has not been cut evenly or it looks like the grass has been ripped off.
- 16

TRANSPORTING

TRANSPORT SAFETY

- Make sure you are in compliance with all local regulations regarding transporting equipment on public roads and highways.
- Make sure the SMV (Slow Moving Vehicle) emblem and all the lights and reflectors that are required by the local highway and transport authorities are in place, are clean and can be seen clearly by all overtaking and oncoming traffic.
- 3. Do not allow anyone to ride on the Cutter or tractor during transport.
- Do not exceed 20 mph (32 kph). Reduce speed on rough roads and surfaces.
- 5. Use retainers on the mounting pins when attaching.
- 6. Always use hazard flashers on the tractor when transporting unless prohibited by law.

When transporting the machine, review and follow these instructions:

- 1. Be sure all bystanders are clear of the machine.
- 2. Be sure that the machine is securely attached to the tractor and all retainer pins are installed.
- 3. Be sure you have installed extra weights on the front of the tractor.
- 4. Clean the SMV emblem, lights and reflectors and be sure they are working.
- Be sure you are in compliance with all applicable lighting and marking regulations when transporting. Check with your local authorities.
- 6. Be sure your machine can clearly be seen by overtaking and oncoming traffic.
- Keep to the right and yield the right-of-way to allow faster traffic to pass. Drive on the road shoulder if permitted by law.

- Always use hazard flashers on the tractor when transporting unless prohibited by law.
- 10. Use pilot vehicles front and rear when transporting during times of limited visibility.

8. Do not allow riders.

- h. The dished shape of the rotating plate under the deck acts as a "stump jumper". The concave shape allows the machine to go over stumps, rocks and other obstacles while operating.
- i. Always reduce gound speed when cutting around obstructions or in close quarters.
- j. The cutter should always be operated with its trailing wheel riding on the ground and not normally lifted for turns or corners unless the ground is very rough or rutted. If lifted, it should be dropped back on the ground as soon as the maneuvering or rough terrain is past.
- k. The cutter has two blades under its frame that are turning at a high rate of speed. With this speed, the blades can pick up objects on the ground and discharge them out from under the frame. It is extremely important that the operator be aware that objects can be discharged in this way and never point the discharge areas toward people, animals or property. These discharged objects are propelled at high rate of speed and are moving fast enough to cause serious injury to people, animals and damage to property. It is better to stop cutting when there are bystanders, especially children, than to take the chance of injury.

ROTATING BLADE

WARNING

The rotating blades can pick up objects and expel them at a high rate of speed. These projectiles can be a hazard to people and property. Always keep deflectors in place. Never operate cuter when there are bystanders, especially children around. Use extra care when operating in populated or congested areas.

If people or children approach the working area, stop machine immediately. Do not restart until the working area is cleared.

 The manufacturer recommends only operating with chain guard deflectors. These deflectors will reduce the amount of debris or number of objects expelled from under the machine.

CHAIN GUARD DEFLECTORS

STORAGE

STORAGE SAFETY

- 1. Store unit in an area away from human activity.
- 2. Do not permit children to play on or around the stored machine.
- 3. Store the unit in a dry, level area. Support the frame with planks if required.

After the season's use, the machine should be thoroughly inspected and prepared for storage. Repair or replace any worn or damaged components to prevent any unnecessary down time at the start of next season. To ensure a long, trouble free life, this procedure should be followed when preparing the unit for storage:

- 1. Clear the area of bystanders, especially small children.
- 2. Thoroughly wash the machine using a pressure washer to remove all dirt, mud, debris and residue.
- 3. Inspect the blades and rotor for damage or entangled material. Repair or replace damaged parts. Remove all entagled material.
- 4. Lubricate all grease fittings. Make sure that all grease cavities have been filled with grease to remove any water residue from the washing.
- 5. Remove the end of the PTO shaft and store inside.
- 6. Touch up all paint nicks and scratches to prevent rusting.
- 7. Move to storage area.
- 8. Select and area that is dry, level and free of debris.
- 9. Unhook from tractor.
- 10. If the machine cannot be placed inside, cover with waterproof tarpaulin and tie securely in place.

- 11. Store the machine in an area away from human activity.
- 12. Do not allow children to play on or around the stored machine.

SERVICE AND MAINTENANCE

MAINTENANCE SAFETY

- 1. Follow ALL the operating, maintenance and safety information in the manual.
- 2. Support the machine with blocks or safety stands when working beneath it.
- 3. Follow good shop practices

-Keep service area clean and dry.-Be sure electrical outlets and toos are properly grounded.-Use adequate light for the job at hand.

- 4. Use only tools, jacks and hoists of sufficient capacity for the job.
- 5. Never work on blades or under the machine unless the tractor engine is off and driveline is disconnected.
- 6. Wear heavy canvas or leather gloves when handling sharp blades.
- 7. Make sure all guards are in place and properly secured when maintenance work is completed.
- 8. Never wear ill-fitting, baggy or frayed clothing when working around or on any of the drive system components.
- 9. Keep hands, feet, hair and clothing away from moving or rotating parts.
- 10. Clear the area of bystanders, especially small children, when carrying our any maintenance and repairs or making any adjustments.

FLUIDS AND LUBRICANTS

1. Grease:

Use an SAE multi-purpose high temperature grease with extreme pressure (EP) performance. Also acceptable is an SAE multi-purpose lithium base grease.

- 2. Gear Box Oil Use 80W-90 gear lube of equivalent for all operating conditions.
- 3. Storing lubricants

Your machine can operate at top efficiency only if clean lubricants are used. Use clean containers to handle all lubricants. Store them in an area protected from dust, moisture and other contaminants.

GREASING

Use the Maintenance Checklist provided to keep a record of all scheduled maintenance.

- 1. Use a hand-held grease gun for all greasing.
- 2. Wipe grease fitting with a clean cloth before greasing, to avoid injecting dirt and grit.
- 3. Replace and repair broken fittings immediately.
- If fittings will not take grease, remove and clean thoroughly. Also clean lubricant passageway. Replace any fitting if necessary.

SERVICING INTERVALS

The period recommended is based on normal operating conditions. Severe or unusual conditions may require more frequent lubrication or oil changes.

8 Hours or Daily

- 1. Lubricate PTO driveline (4 locations).
- 2. Lubricate castor shaft (1 location).
- 3. Lubricate castor wheel (1 location).

40 Hours or Weekly

- 1. Check gear box oil level. Add as required.
- 2. Pull PTO driveline apart. Clean and lubricate the telescoping components.

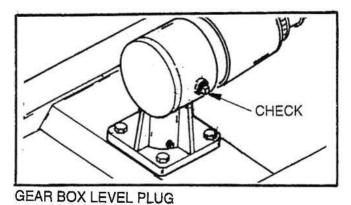

Annually

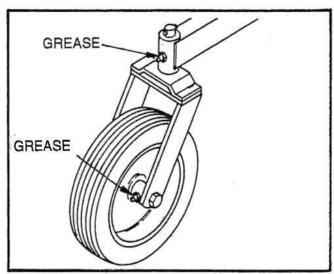

- 1. Wash machine.
- 2. Clean and lubricate PTO driveline guard.

SERVICE RECORD

See Lubrication and Maintenance sections for details of service. Copy this page to continue record.

MAINTENANCE

By following a careful service and maintenance program for your machine, you will enjoy many years of trouble-free operation.

TRAILING WHEEL HEIGHT

When setting the height of the trailing wheel, follow this procedure:

- Clear the area of bystanders especially small children.
- Raise the 3 point hitch or lift with a hoist until the trailing wheel is slightly off the ground.
- Stop engine, set park brake, remove ignition key and wait for all moving parts to stop before dismounting.
- 4. Place large blocks or safety stands under the deck to support the machine.
- 5. Remove the bolt through the trailing wheel support bracket.
- Install the bolt through the hole to give the desired machine height.
- 7. Tighten the bolt to its specified torque.
- 8. Remove the blocks or safety stands.

TRAILING WHEEL

SHEAR PIN

A shear pin is located on the gear box input shaft to prevent overloading the drivetrain.

To replace the shear pin, follow this procedure:

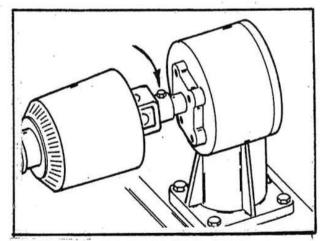

- 1. Clear the area of bystanders especially small children.
- Stop engine, set park brake, remove ignition key and wait for all moving parts to stop before dismounting.
- 3. Lift the guard and use a hammer and punch to remove the broken shear pin.
- Install a replacement shear pin and tighten to the specified torque.

CAUTION

(Use 1/2"x 3" grade 2 hex bolt),

Guard is shown lifted for illustrative purposes only. Do not operate machine with guard lifted.

- Be sure the plastic shield is adjusted to cover the yoke.
- 6. Close and secure guard.
- Safety ring on front of gearbox input shaft should be in groove and inspected for wear. Replace if worn or disfigured.

SHEAR PIN

Use only genuine Tebben replacement parts at all times. This shear bolt is designed to protect the machine from overloading.

IMPORTANT

(Use 1/2"x 3" grade 2 hex bolt)

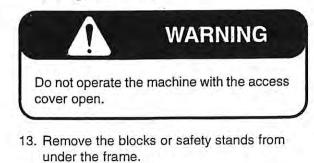

22 /1100

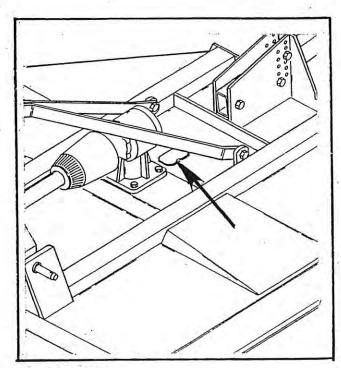

BLADE REPLACEMENT

A blade may become bent, chipped or broken when using and have to be replaced.

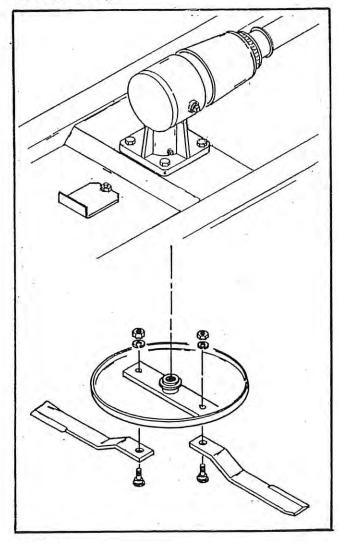

When replacing a blade, follow this procedure:

- 1. Clear the area of bystanders, especially small children.
- 2. Raise the machine above the ground to provide access to the blades.
- 3. Stop engine, set park brake, remove ignition key and wait for all moving parts to stop before dismounting.
- Support the machine with large blocks or safety stands.
- 5. Remove the nut through the access cover.
- 6. Push or tap the blade pin down.
- Remove the old blade and replace with a new one.
- 8. Tap or drive the blade bolt back into position.
- 9. Tighten the mounting bolt to its specified torque.
- 10. The blades and stump jumper assembly are matched at the factory to minimize vibration. In most cases, both blades should be replaced if one requires changing to keep the assembly in balance. This is particularly true if the remaining blade is badly worn.
- 11. Repeat with other blade.
- 12. Swing the access cover back over the hole and tighten the nut.

ACCESS COVER

DRIVELINE MAINTENANCE

The PTO driveline is designed to telescope to allow for dimensional changes as the machine goes through its operating range. A tubular guard encloses the driving components and is designed to turn relative to the driving components. The driveline should telescope easily and the guard turn freely on the shaft at all times. Annual disassembly, cleaning and lubrication is recommended to insure that all components function as intended. To maintain the driveline, follow this procedure:

- 1. Remove the driveline from the machine.
- 2. Pull driveline apart.
- Use a screwdriver to pry the tabs out of the sleeves on each end. There are 2 tabs per guard.
- 4. Pull the shaft out of the plastic tubular guard.
- Use a solvent to clean the male and female portions of the telescoping ends.
- 6. Apply a light coat of grease to each end.
- Use a solvent to wash the grooves on each end where the tabs are located. Clean each tab also.
- 8. Apply a light coat of grease to each groove.
- 9. Insert the shaft into its respective guard and align the slots with the groove.
- Insert the tabs through the slots and seat in the groove.
- 11. Check that each guard turns freely on the shaft.
- 12. Assemble the driveline.
- 13. Check that the driveline telescopes easily.
- Replace any components that are damaged or worn.
- 15. Install the driveline on the machine.

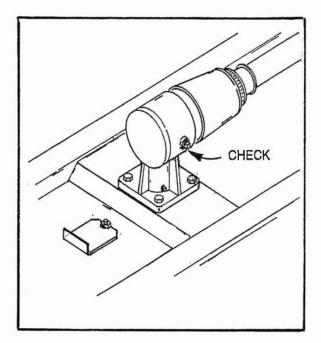

GEARBOX MAINTENANCE

The heavy duty gearbox used on the Cutter will give many years of trouble-free service with minimal maintenance requirements. Maintain the gearbox by following this procedure:

- 1. Oil level:
 - a. Remove the level plug from the front of the gearbox.
 - b. The oil should just fill a few of the threads.
 - c. Add through the fill plug if required.

IMPORTANT

Check the oil level only when the unit is cold and the machine is on the level.

OPTIONAL SLIP CLUTCH MAINTENANCE

An optional slip clutch is available on the machine. Proper clutch operation requires that the friction plates be set at the required pressure and the material be clean. To ensure these requirements, follow this procedure:

- 1. Before first use or after a long storage, loosen set screw on pressure nut.
- 2. Back off pressure nut to free clutch plates.
- 3. Tighten pressure nut until the clutch plates are snug. Then tighten pressure nut another 1/4 turn.

WARNING

Machine is shown with guard lifted for illustrative purposes only. Do not operate machine with guard lifted.

- 4. Run the driveline at low idle to slip the clutch until it starts to smoke. This will remove the dirt, corrosion and surface gloss from the clutch plate faces.
- 5. Tighten the pressure nut another 1/2 turn to set the clutch plate pressure.
- 6. Tighten the set screw in the pressure nut to lock it in place.
- 7. Normally the clutch will slip at a 20% higher torque after the "run in" than before.
- Check the temperature of the clutch after running for 20 minutes and every 8 hours after that. If the clutch is hot to the touch or smokes, reset the pressure nut or the clutch plates will burn up and fail. Tighten the pressure nut in 1/4 turn increments and try during operation. Readjust again as required.
- 9. The clutch should be set so it does not slip during normal operation. It should slip when the unit is overloaded from heavy cutting or when striking an obstruction. If it is set for too high a torque to slip, components will fail.

TROUBLE SHOOTING

The Tebben Rotary Cutter uses a pair of free-swinging blades on a rotor to cut grass and other types of weeds and brush. It is a simple and reliable system that requires minimal maintenance.

In the following section, we have listed many of the problems, causes, and solutions to the problems that you may encounter.

If you encounter a problem that is difficult to solve, even after having read through this trouble shooting guide, please call your local Tebben dealer or distributor. Before you call, please have this operator's manual from your machine and the model/serial number ready.

PROBLEM	CAUSE	SOLUTION
Blade pan and blades don't turn.	Broken shear pin.	Replace shear pin.
Poor cutting job.	Traveling too fast.	Slow down.
	Blades dull.	Sharpen blades.
	Grooves in grass.	Bent blade, straighten or replace blade.
		Machine not level, level machine.
	Scalping of grass.	Machine too low, raise machine.
	Grass being left.	Traveling too fast, slow down. Damaged blade, replace.
Gearbox seal leaking.	Oil overheating. (Improper oil)	Improper oil should be replaced with specified oil (Section 5.1.1)
	Worn seal.	Replace seal.
	Improper installation of seal.	Replace seal.
Noisy gearbox.	Poor gear mesh.	Remove input shaft and gear, replace worn parts. Reassemble and use shims to give a gear backlash.
Clutch Slips.	Overloaded. Clutch loose. Clutch worn out.	Slow travel speed. Tighten Springs on clutch plates. Replace clutch components or assembly as required.

ASSEMBLY

The machine is shipped from the factory in a partially disassembled form that allows for easy and convenient shipping.

When preparing for the customer, follow this procedure:

- 1. Clear the area of bystanders.
- 2. Use 2 men to guide or direct and handle the heavy and bulky components.'
- 3. Use a crane, hoist or forklift of capacity and stability to handle the components.
- 4. Attach to the lifting device, remove tie-downs, lift from the truck and move to the assembly area. Drive slow and keep the machine close to the ground.
- 5. Remove the mounting frame, pins, gearbox guard and driveline from the frame and lay to the side.
- 6. Assemble the mounting frame to the front of the machine. Be sure teh vertical frame is assembled so the mounting pin hole faces forward.
- 7. Install the 3 point hitch mounting pins.
- 8. Tighten the fasteners to their specified torque level.
- 9. Remove the top 2 cap screws from the input shaft cover.
- 10. Install the guard and tighten the cap screws to the specified torque (45 ft-lbs).
- 11. Lift the guard up to expose the input shaft.
- 12. If equipped with a shear bolt:
 - a. Remove shear pin bolt.
 - b. Clean the PTO driveline yoke and the input shaft.

Machine is shown with guard lifted for illustrative purposes only. Do not operate machine with guard lifted.

WARNING

- c. Remove the front shaft ring and slide the yoke over the shaft.
- d. Install the safety ring in the groove on the end of the input shaft.
- e. Install the shear pin through the input shaft and tighten.
- f. Flip the guard over the input shaft and clip in place.
- g. Check that all fasteners are tight.
- 13. If equipped with a slip clutch:
 - a. Remove the nut on the end of the input shaft.
 - b. Install the clutch on splined input shaft.
 - c. Tighten nut on the input shaft to secure clutch.
 - d. Assemble driveline to clutch. Tighten mounting bolt to their specified torque.
 - e. Flip the guard over the input shaft and clip in place.
 - f. Check that all fasteners are tight.

OPTIONAL EQUIPMENT

CHAIN GUARD DEFLECTORS

A Chain Guard deflector for the front and rear is available for the Rotary Cutter. Tebben recommends that the machine be equipped with these deflectors to minimize expelled debris.

SLIP CLUTCH

A Slip clutch on the gearbox input shaft is available from the factory. Specify the clutch in place of the shear pin when ordering from the factory.

BOLT TORQUE

CHECKING BOLT TORQUE

ENGLISH TORQUE SPECIFICATIONS

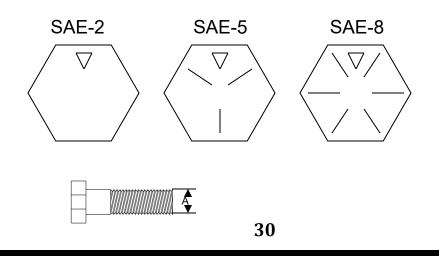

The tables shown below give correct torque values for various bolts and cap screws. Tighten all bolts to the torques specified in the chart unless otherwise noted. Check tightness of bolts periodically, using bolt torque chart as a guide. Make sure To replace worn out bolts and nuts with the same grade your machine came with.

Torque figures indicated above are called for non-greased or non oiled threads and heads unless otherwise specified. Therefore, do not grease or oil bolts unless otherwise specified in this manual. When using locking elements, increase torque values by 5%.

Torque values for bolts are identified by their head markings.

IMPORTANT: Locking nuts on cylinders and pivoting components should only be tightened to the point where the bolt no longer turns. Over tightening of these nuts can result in damaged parts.

PARTS LIST

This manual contains a parts list for your machine. It is divided into major sections which correspond to the groups shown in the Table of Contents and accompanying illustration.

The first page of each major section lists the contents of that section, each of which consists of exploded views and related tabular listings.

WHEN ORDERING PARTS

Always give your dealer the Model and Serial Number of your machine to assist him in ordering and obtaining the correct parts. Use the exploded view and tabular listing of the area of interest to exactly identify the required part.

USING THE MANUAL

Parts data consists of exploded view illustrations and associated parts list tables which are read as follows:

ITEM

The item number is the identifier number from the illustration. For example, number 3 on and illustration points to a component which is item 3 on the accompanying table.

PART NUMBER

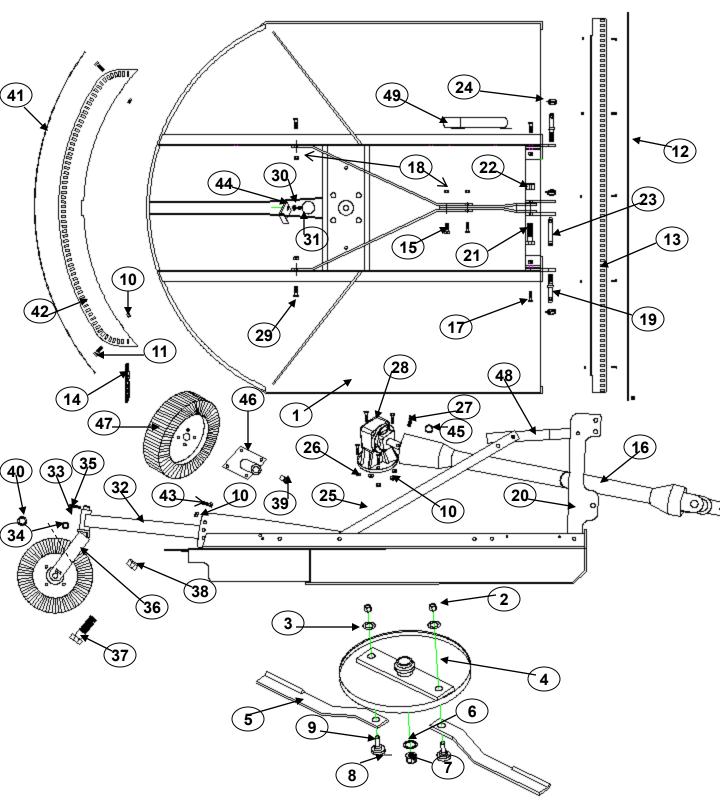

The part number is the number by which the component may be identified and ordered from TEBBEN ENTERPISES and its network dealers.

DESCRIPTION

This column contains the name and description of the part.
